# DBusMenu

- A way for applications to expose their menus over D-Bus transparently

- Cross-desktop (Qt and GTK+ implementations)

- Limitations :

  - No support for widget in menu items
 - No support for generated icons

DbusMenu in the system tray

First there was XEmbed...

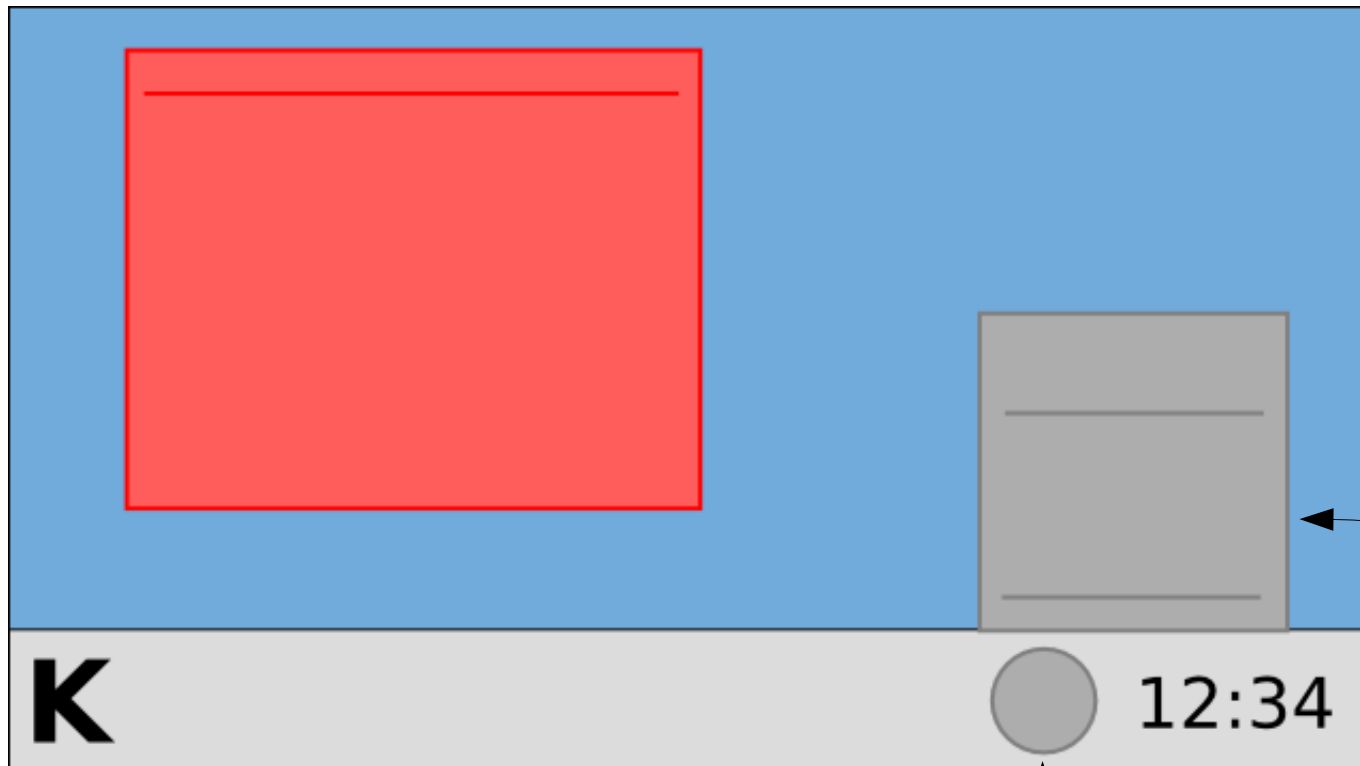

Handled by the application

DbusMenu in the system tray

Then came KStatusNotifierItem...

DbusMenu in the system tray

And finally DBusMenu

Handled by the system tray applet

DbusMenu in the menubar

- Qt and GTK+ patches

- Plasma menubar widget

- GNOME menubar applet
